Section 1

SPECIFICATIONS

Model: 5201 Electromagnet Specifications

Projected Field: (at max current of 20A)

$B_x = \pm 0.3\text{ T}$ (3000G)
(X,Y,Z = 0, 0, 4mm)
 $B_z = \pm 0.2\text{ T}$ (2000G)
(X,Y,Z = 14, 0, 4mm)

Projected Field Region (for B_x)

X = 0mm
Y = -5 to + 5mm
Z = 0 to 12mm
X = $\pm 14\text{ mm}$
Y = 0mm
Z = 0 to 12mm

(for B_z)

Coil:

| | |
|--|----------------|
| coil resistance (20°C) | 0.85 Ohm |
| max resistance (hot)* | 1.02 Ohm |
| max power (water cooling) | 20A/20V (400W) |
| max power (ambient air cooling) | 5A/5V (25W) |

Self Inductance:

Approx 40mH at 1 Hz

(The apparent inductance reduces with frequency due to eddy currents in the solid poles)

Cooling: (measured at water I/O manifold)

1.0 Liter/min, 2.0 bar [0.26 USG/min, 28 psid]

Thermal Interlock:

Open circuit above 75° C (167° F)

Dimensions:

Drawing 11901860
70.0 mm W x 60.0 mm D x 120 mm H
2.8 inch W x 2.4 inch D x 4.7 inch H

Mass:

2.1 kg (4.6 lb)

***CAUTION - The value of maximum coil resistance given should not be exceeded.
At this resistance the coils are at maximum safe temperature for continuous operation.**

Section 2

WARNINGS

REFER TO WARNINGS BELOW BEFORE OPERATING ELECTROMAGNET SYSTEM

1 Personnel Safety

In operation the magnet fringing field in the vicinity of the pole gap is in excess of 0.5m T (5G). This can cause malfunctioning of sensitive electronic and magnetic components. We recommend that warning signs are posted indicating that a magnetic field may be present.

2 Ferromagnetic Objects

During operation the magnet exerts magnetic attraction towards ferromagnetic objects in the near vicinity of its pole faces. Keep ferromagnetic items clear!

3 Arcing

This magnet stores energy in its field during operation. Do not disconnect any current lead while under load or the magnetic field energy will be discharged across the interruption causing arcing and possible damage to electronic circuits.

4 Coil Hot Resistance

Do not exceed the maximum coil hot resistance given in the specifications or coil overheating and possible damage may occur

5 Watches, Credit Cards, and Magnetic Disks

Do not move magnetically sensitive items into the close vicinity of the magnet pole gap. Even some anti-magnetic watches can be damaged when placed in close proximity to the pole gaps during operation. Credit cards, and magnetic disks are affected by magnetic fields as low as 0.5m T (5G). Depending on the previous operating field and the pole gap, the remanent field in the gap can be in excess of 0.5mT (5G) with the magnet power supply off or disconnected.

6 Power Supply

Refer to the power supply manufacturers manual for additional important safety information.

Section 3

INSTALLATION

Mounting Position (Refer to drawing 11902050)

The magnet system can be mounting in any orientation, including being completely inverted. Four M3 clearance holes are provided on the magnet transition plate for mounting the magnet.

Electrical Connections

The magnet system comes with integrated wiring for the magnet. Never connect or remove cables from the magnet system with the DC power energized otherwise damage to the magnet power supply may occur. Follow instruction below for making electrical connections.

Power Supply (Refer to drawing 11902000 & 13900420)

1. Firstly ensure the power supply is turned off and the AC power cable is disconnected.
2. Plug in the magnet cable plug into the back of Kepco BOP power supply.
3. Secure the connecting plug with the two securing thumbscrews.
4. Connect the three sleeved wires to the output connector block on the rear of the Kepco BOP power supply as detailed below.
 - Black Wire with Red sleeve to Output
 - Black Wire with Blue sleeve to Common
 - Green wire to Ground

Note: Reconnect AC power cable to power supply . The magnet system is now ready to use. Do not power up the magnet unless the cooling water is turned on and flowing at 1.0 liters/min.

Electrical Interlocks

The Model 5201 has two thermostats, Selco part no 802L-075. They are located on the pole/coil assembly heatsinks and wired in series. The thermostats are normally closed, opening when the coil heatsink temperature exceeds 75° C, +/- 5° C.

Water Cooling (Refer to drawing 11902000)

The Model 5201 can be operated to an average coil temperature of 70° C. Assuming an ambient laboratory temperature of 20° C and a temperature coefficient of resistivity for copper of 0.0039/° C, the hot resistance of the coil should not exceed 20% more than the ambient temperature "cold" resistance. The coil thermostat will open when either pole/coil heatsink temperature exceeds approximately 75° C. If either temperature switch opens then the Magnet power supply circuit breaker will trip to the off position. Clean, cool (16° C - 20° C) water at 1.0l/min at 1.0 bar (28 psid) should be used to cool the 5201 magnet.

The cooling copper tubes are electrically isolated from the coils to avoid electrochemical corrosion. A 50 micron filter should be placed before the input to the magnet to trap particulates and avoid blockage of the cooling circuits.

Water Cooling Connections

The magnet is supplied with two 3.0m m (1/8") I.D. 1 meter long flexible hoses that connect the water cooling circuit to the hose couplings on the rear of the Water I/O Manifold. On the front of the Water I/O Manifold are two barbed "push on" hose couplings to suit 6 mm (1/4") I.D. rubber hose.

- Water Inlet: Connect to a clean water source fitted with a suitable metering valve (to control water flow).
- Water Outlet: Connect to drain.

Inlet Water Metering Valve Kit.

Metering Valve (brass)
required)

Hex Nipple (brass) 1/8" NPT female
Hose Push on (black) 1/4" I.D.
required)

SWAGELOCK Cat No: B-4MG4-MH (1

SWAGELOCK Cat No: B-2-CN (1 required)
SWAGELOCK Cat No: PB-4-BK (as

Water Control Panel, Part 11902480.

GMW offers an optional Water Control Panel for users that have a suitable supply of cooling water. The 11902480 includes a water filter, flow control, flow indicator and flow interlock in one package. Since the thermal capacity of the Model 5201 Electromagnet is small it is particularly important to have the correct water flow to avoid overheating. A water flow interlock ensures that the Power Supply for the 5201 will not provide current unless both the water flow and coil temperature interlocks are in the closed (safe) position.

Section 4

OPERATION

Electromagnet System (Kepco Power Supply operating in Current Control)

1. Set Voltage and Current toggle switches to off before turning on power main circuit breaker.
2. Set Current control potentiometer to fully counterclockwise position. Turn the potentiometer clockwise five turns. This position is approximately equal to a zero current setting.
3. Select Mode switch to Current.
4. Turn on power supply main circuit breaker.
5. Turn on Current control toggle switch
6. Turn the Current control potentiometer clockwise for positive current or counterclockwise for negative current as required.

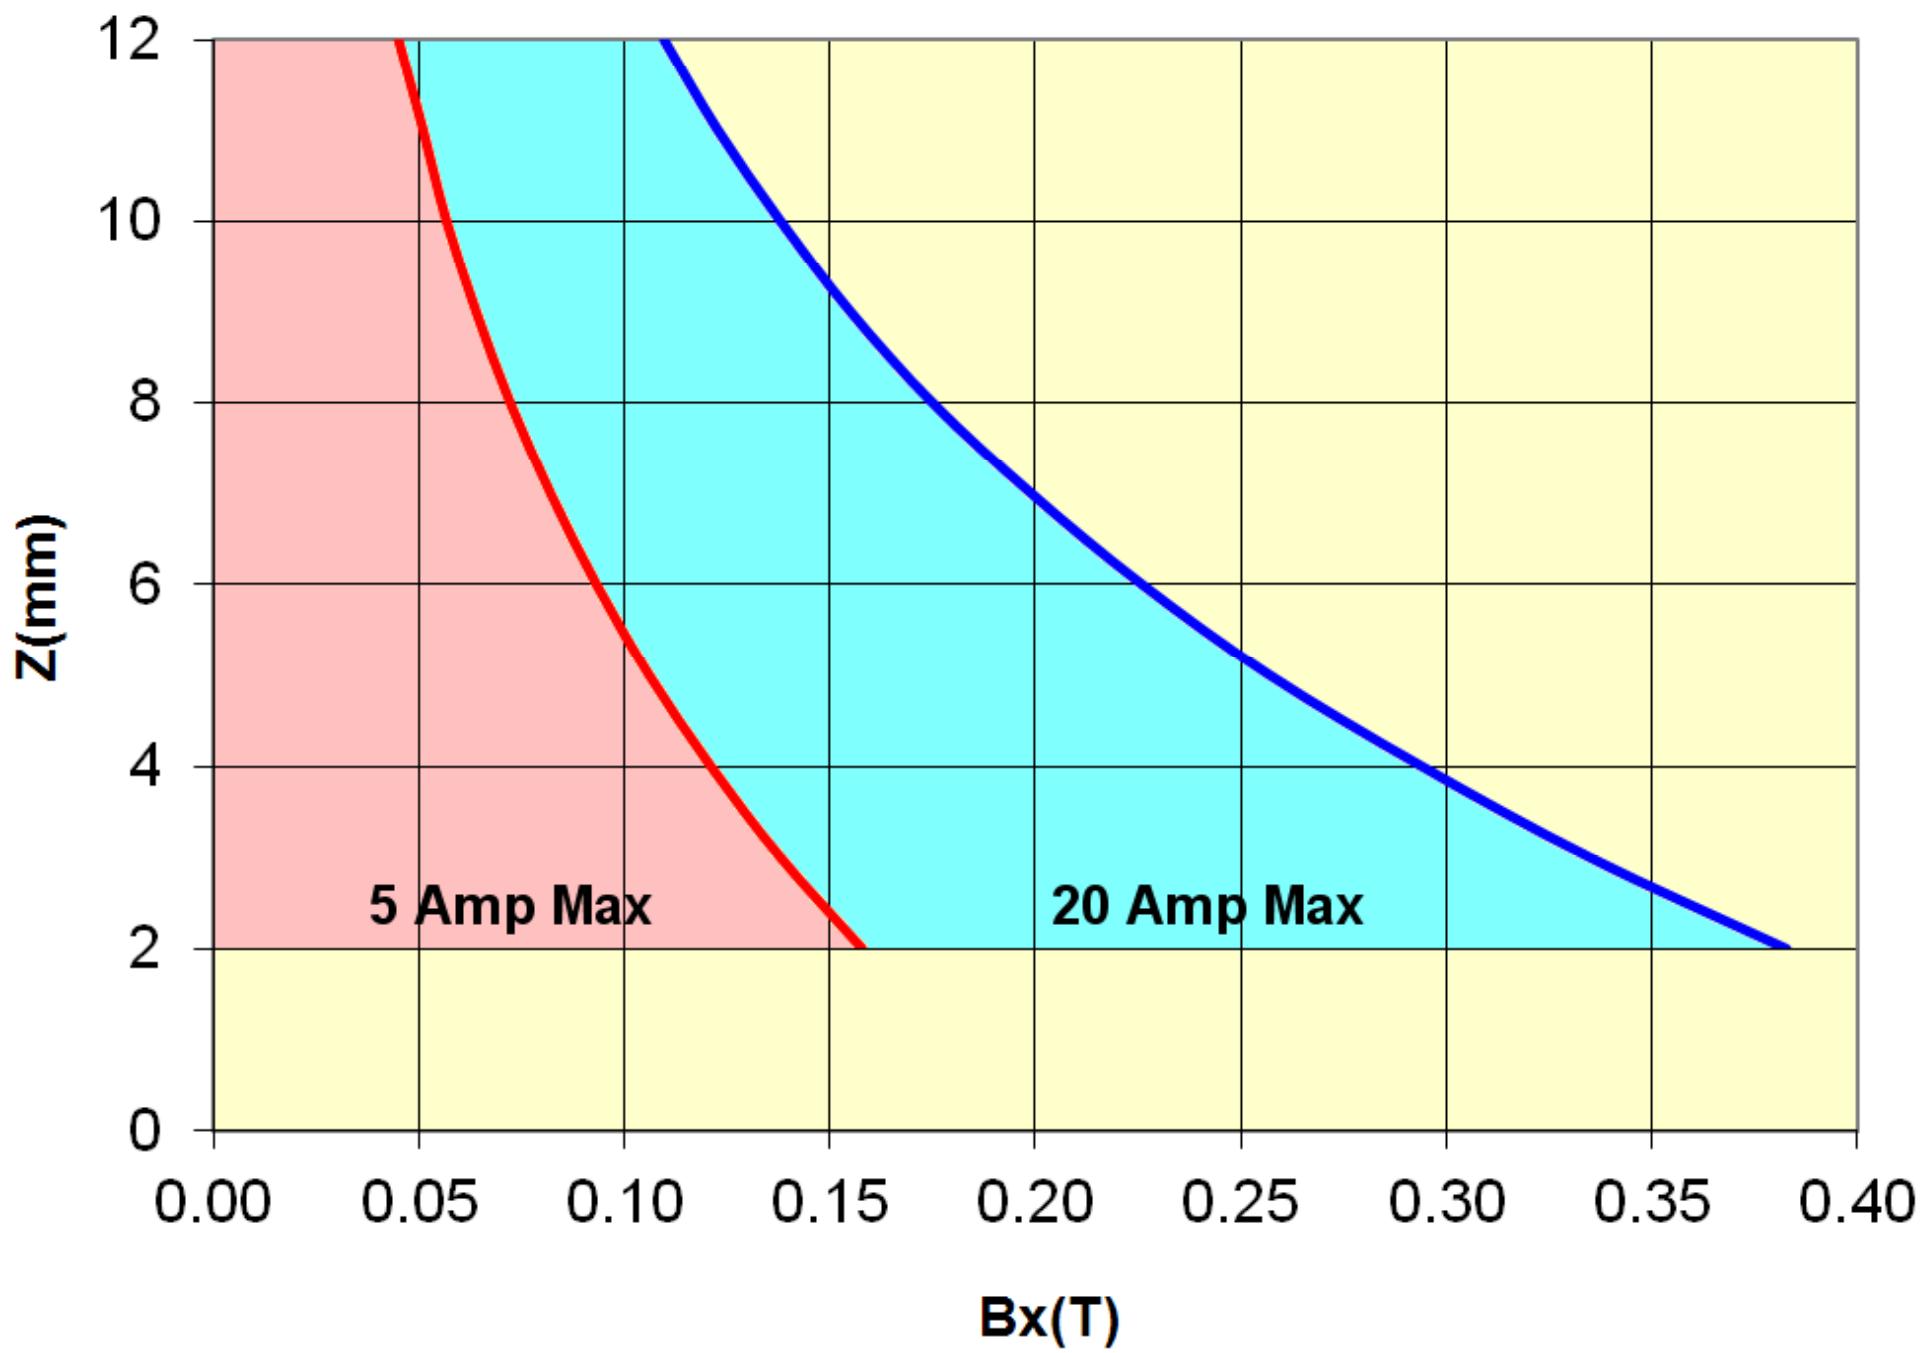

Section 5

MAINTENANCE

Electrical Connections on the magnet terminal block should be checked annually. The electrical connections should be clean and tight. Discoloration is a sign that the connection is overheating and must be rectified before further use of the magnet.

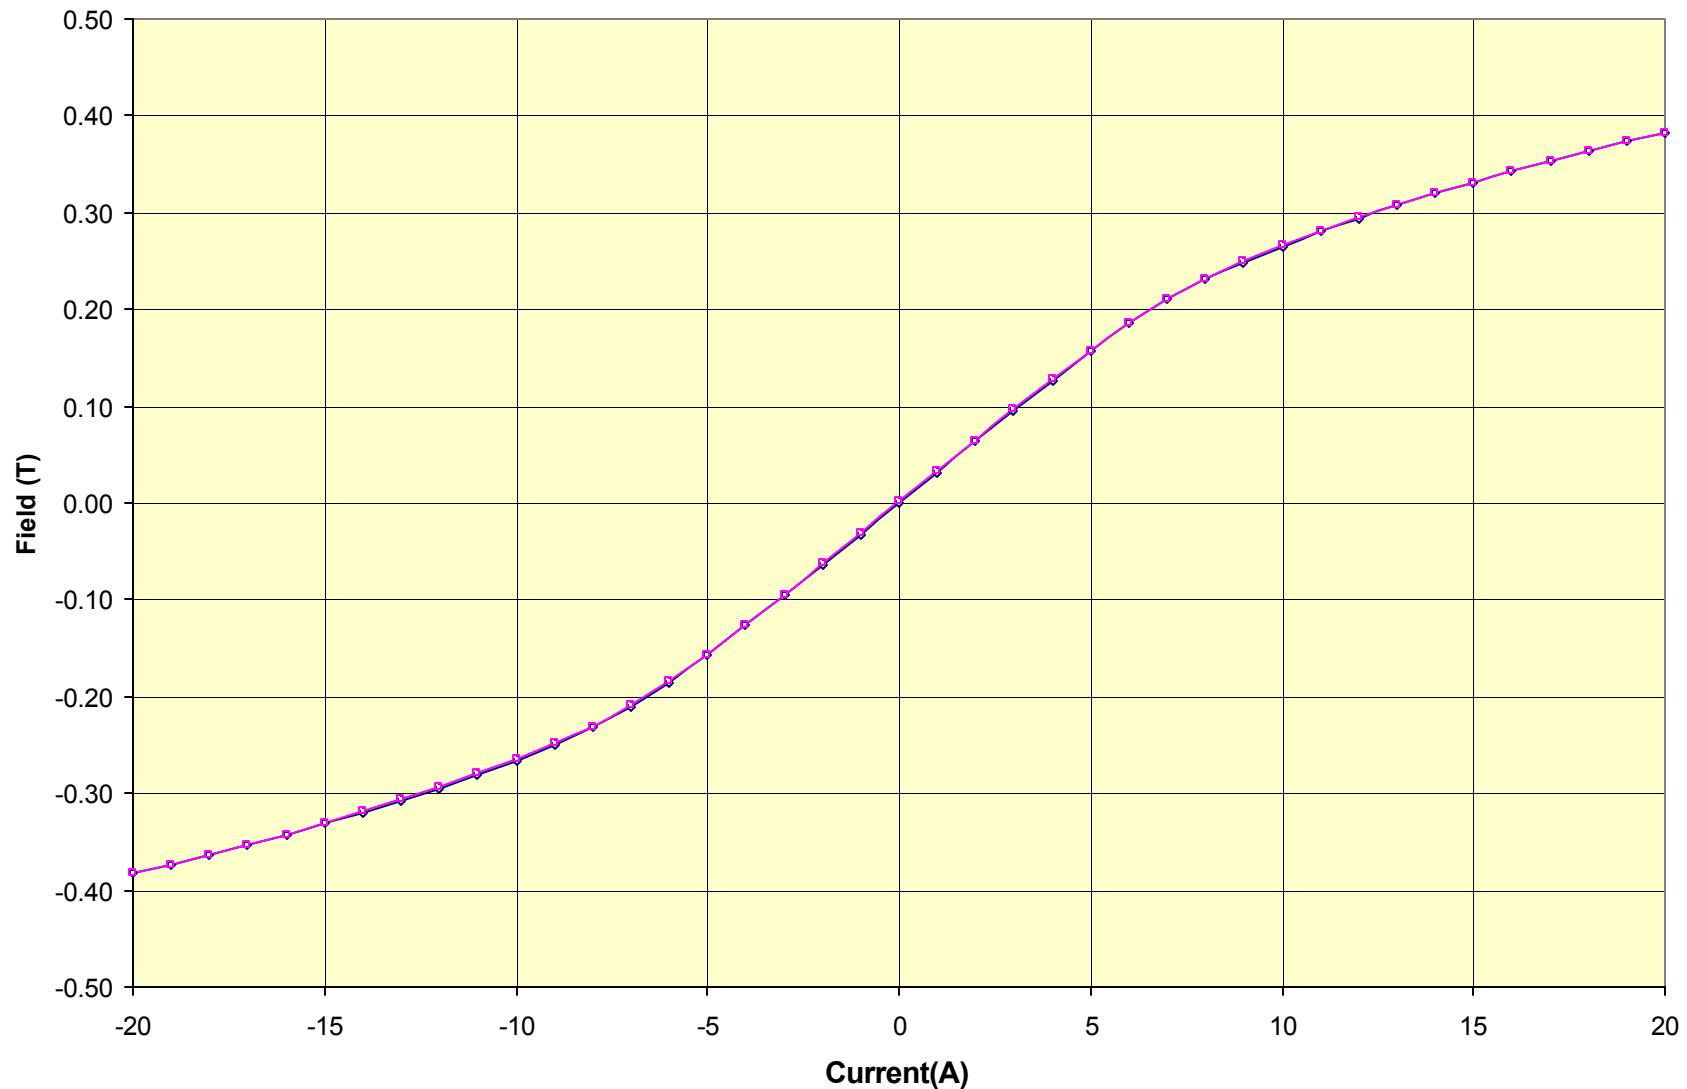

Water Hoses should be checked regularly for water leaks. Any leaks should be rectified before further use of the magnet.

MODEL: 5201 MAGNET

CURRENT AND INTERLOCK CABLE 20A
5 CORE CABLE 2.5 sq/mm [14 AWG]
PART NO 16900460

KEPCO MODEL: 20-20M BIPOLAR POWER SUPPLY

CURRENT AND INTERLOCK CABLE 20A
5 CORE CABLE 2.5 sq/mm [14 AWG]
PART NO 16900460

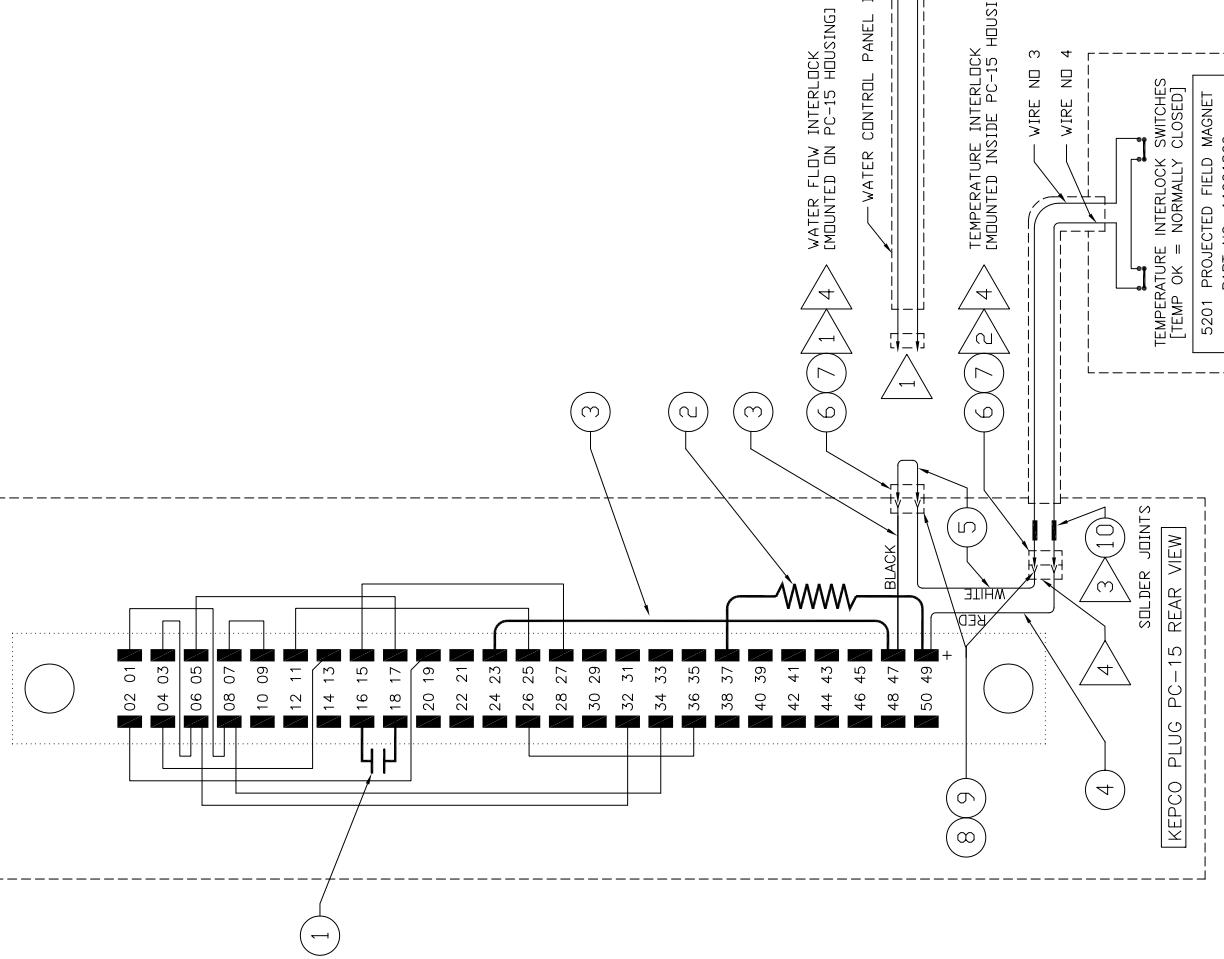

| ELECTROMAGNET SYSTEM ELECTRICAL REQUIREMENTS | | | | | |
|---|-----------|-----------|--------|--------|--------|
| AC INPUT POWER 1 PHASE, 50 to 65Hz | 115V | 208V | 230V | | |
| AC INPUT FULL LOAD CURRENT | 11.0 | 6.5 | 6.0 | | |
| RECOMMENDED MAIN AC BREAKER | 15 | 10 | 10 | | |
| RECOMMENDED AC POWER OUTLET | 5-15R | — | — | | |
| RECOMMENDED AC CABLE SIZE | 1.5 SQ/MM | 1.0 SQ/MM | 1.0 MM | 1.0 MM | 1.0 MM |
| NOTE: DYNAMIC, CHOCKING, POWER SURGE & PEAK FOR 1. DIAMETRIC, 1.4KV AC. POWER | | | | | |

 2 > TEMPERATURE INTERLOCK CONNECTOR. THIS CONNECTION PROVIDES A CONVENIENT DISCONNECTION FOR THE TEMPERATURE INTERLOCK INCOMING CABLE. [MOUNTED INSIDE PC-15 HOUSING WHEN ASSEMBLED].

 3 > SOLDER AND HEATSHRINK JOINTS BETWEEN 2.5 Sq/mm WIRE NO. 3 & 4 TO 0.2 Sq/mm [20 AWG] CONNECTING WIRFS, ONTO KEPCO PLUG TERMINALS [NO 47 & 49]

NOTE:

1. DOWEL HOLES ARE PROVIDED ALONG THE X and Y MAGNETIC AXES. HOLES ARE 12.5mm DISPLACEMENT [9 PLACES TOTAL]. DOWEL HOLES ARE 1.00 CLEARANCE HOLES TO SUIT 1.00 DOWEL PINS.

2. BEFORE FITTING THIS ALIGNMENT PLATE, THE TOP COVER (ITEM 5, P/N: 17905120 ON DRAWING 1190860) MUST BE REMOVED. CLEAN THE POLE POCKETS AND THE MAGNET POLE FACES. FIT ALIGNMENT PLATE WITH THE LABEL LOCATED TO THE MAGNET FRONT, REFER DWG NO: 11901860.

3. MAGNET FIELD DIRECTIONS ARE SHOWN FOR POSITIVE MAGNET CURRENT.

4. USE ITEM 4 FOR MAGNETIC ALIGNMENT [CARBON STEEL] DOWEL PIN.
USE ITEM 3 FOR NON MAGNETIC LOCATION [STAINLESS STEEL] DOWEL PIN..
