New Sentinel 3 Service Level Agreements

[PPM Test](#) is pleased to announce that new [Service Level Agreements](#) (SLAs) for [Sentinel 3](#) systems are now available. These new SLAs can provide Sentinel 3 owners access to additional services such as regular calibration, repairs to equipment beyond the warranty period and updates to firmware and software.

Sentinel 3 is a cutting edge RF over fibre test and measurement system that can be used in aviation applications for testing such as EMP, EMC and HIRF. It provides a rapid and accurate testing solution with the capability to allow a single receiver to monitor up to 48 sensors sequentially or two sensors simultaneously.

Where the Sentinel 3 is a specialist piece of test equipment, it's important to ensure the systems are performing to the high standards that test and measurement applications require – and as a result of them being built in small volumes, specialist knowledge is often necessary for system maintenance and repairs.

To satisfy this need for specialist maintenance and repairs, PPM Test now offers two levels of cover, meaning customers can choose the SLA option most suited to their individual requirements.

Level 1 – Calibration Only

- Calibration of the Sentinel 3 system – including necessary adjustments to meet the published specification
- Test data to demonstrate compliance plus full set of test data prior to any adjustments
- Overview of test equipment used in the calibration
- Certificate of calibration
- Required software upgrades

- Preferential pricing for repairs outside of the warranty and SLA.

Level 2 – Calibration and Repair

- All level 1 calibration elements
- Evaluation of necessary repairs
- Approved repairs using new or refurbished parts
- Verification that the repaired system meets or exceeds its published specification
- Preferential pricing for additional repairs not covered by the Level 2 SLA.

To find out more about the Service Level Agreement options for the Sentinel 3 system, please email: sales@ppmtest.com.

Editor's notes

- PPM Test specialises in RF over fibre systems for test and measurement applications. The company has over 25 years' experience designing and manufacturing RF over fibre optic links for EMC and harsh environment measurement testing.

- Launched in 2017, PPM's leading test and measurement 'Sentinel 3' system has been adopted by many of the leading civil and military aircraft manufacturers and aircraft certification houses.
- PPM Test also supplies associated EMC test components such as magnetic and electric field sensors, baluns and current probes. These systems and products have a broad range of test applications including:
 - Aircraft EMC testing and certification – HIRF, LLSF, LLSC and lightning
 - Electro-magnetic Pulse testing (EMP, HEMP, NEMP)
 - High power RF susceptibility testing (automotive, ships, buildings/structures)
 - Ultra-High Voltage testing
 - Directed energy testing
 - Antenna remoting/antenna characterisation.
- Based in the UK, PPM Test has customers around the world including: Airbus, BAE Systems, QinetiQ, RINA Consulting Defence Ltd, Lawrence Livermore National Labs and many other EMP and Aircraft Testing Specialists.
- PPM Test is a division of Pulse Power and Measurement Ltd (PPM). PPM was founded in 1994 and has three further divisions: PPM Power, PPM Systems and **ViaLite Communications**. PPM's hub website: www.ppm.co.uk.
